Support of Transport Canada's SMS Phase #1 & #2 submissions for the Halifax International Airport Authority (HIAA)

HIAA controls the Halifax Stanfield International Airport, located on Canada's east coast. It is the region's principle full service airport; providing passengers and cargo clients with access to markets across Canada, the United States of America and Europe. The Halifax Stanfield International Airport welcomes approximately 3.4 million passengers annually and is internationally recognized for its customer service.

Services:

ISR was selected by the HIAA for these projects in preparation for their submissions to satisfy the requirements for Phase #1 and #2 of the transition to compliance with Transport Canada SMS regulations.

For Phase #1, ISR performed a gap analysis of the Halifax Stanfield International Airport and developed an implementation plan for their submission to Transport Canada. In support of this work, ISR delivered introductory indoctrination and specialized SMS training to HIAA staff and executive management.

For Phase #2, ISR supported the HIAA in the development of their Safety Management Plan (SMP) and SMS 'Toolbox' (supporting procedures, templates, etc.). The ISR team developed a risk management process for the SMP and supporting 'Toolbox' document containing tools such as a risk matrix and risk criteria. In addition, the ISR team developed a training program and matrix for the HIAA, which details specific SMS training courses and their requirements. In support of this work, ISR delivered specialized risk management and investigation and analysis training to the HIAA SMS Working Group.
