Support of Transport Canada's SMS Phase #1 & #2 submissions for the St John's International Airport Authority (SJIAA)

The SJIAA operates St. John's International Airport. The airport is located in St. John's Newfoundland on Canada's east coast. The St. John's International Airport is now the 10th busiest airport in Canada with a volume of 1.25 million passengers annually.

Services:

ISR was chosen by the SJIAA for these projects in preparation for their submissions to satisfy the requirements for Phase #1 and #2 of the transition to compliance with Transport Canada SMS regulations.

For Phase #1, ISR performed a gap analysis of the St.

John's International Airport and developed an implementation plan for their submission to Transport Canada.

For Phase #2, the ISR team supported SJIAA staff in the development of their Safety Management Plan. To accomplish this task, the ISR team traveled to St. John's to lead SJIAA staff through a three-day interactive workshop that included the development, documentation and training of the SMS components and elements required by Transport Canada for Phase #2.
