Support of Transport Canada's Phase #1 SMS Implementation for the Victoria Airport Authority

VAA is the operating body of the Victoria International Airport (YYJ) which is located on the Saanich Peninsula, 22 km north of Victoria on Vancouver Island.

Services:

ISR assisted the VAA with the preparation of their submission of an implementation plan to Transport Canada (TC) to satisfy the requirements for Phase #1 of the transition to compliance with TC SMS regulations.

To complete this task, ISR reviewed VAA's documentation and travelled to the Victoria International Airport to perform a gap analysis.

Based on this work and extensive experience in working with TC, ISR made recommendations to the VAA to strengthen their submission.
