SMS training for Executives for the Geneva's International Airport Authority

Geneva's International Airport Authority (GIAA) operates Geneva's International Airport (GVA), which is located along the Swiss-French border. The airport can be accessed from both Countries. It has a single concrete runway, which is the longest in Switzerland making it a major hub for easyJet, Flybaboo and Swiss International Air lines. It is also the host office for the International Air Transport Association (IATA) and the world headquarters of the Airports Council International (ACI).

Services:

ISR, in association with Jacques Whitford, were tasked by the GIAA to translate the Transport Canada SMS model and standard ISR TC SMS training material to French for the delivery of the course to GIAA staff. The course was further modified to cover the ICAO SMS model.

The course was then delivered over four days.

The course also included a gap analysis workshop, which led participants through an actual gap analysis of the proposed SMS plan developed by the GVA safety staff. Participants obtained a set of tools and activities to help with the development, implementation and assessment of SMS.
