SMS training for Executives for the Vancouver International Airport Authority

Vancouver International Airport (YVR) is Canada's second busiest airport, serving more than 16 million passengers and handling over 225,000 tons of cargo per year. Since assuming responsibility for the airport in 1992, the Vancouver International Airport Authority (VIAA) has made significant improvements to the airport.

Services:

ISR, in association with Jacques Whitford, developed and delivered an airport-specific three-day executive SMS training program.

This training program informed VIAA executives about the Transport Canada SMS model and its applicable regulations.

From this training, participants obtained a set of tools and activities to help with the development, implementation and assessment of SMS at their airport.
