

SMS – Implementation Plan

A customized implementation plan will help turn an SMS into reality.

What is it?

An implementation plan clearly outlines the steps needed to close the gaps between your existing safety programs and a fully integrated and effective SMS within an identified timeframe. Generally, this is done via a “phased in” approach meaning that your SMS should be implemented piece by piece.

Why do it?

An implementation plan will provide your organization a clear path forward which will allow your new SMS to take root. Furthermore, it will help your organization track and manage the performance of its growing SMS.

Why chose ISR?

Implementing a SMS takes time. Using ISR’s vast knowledge and experience helps reduce that time as much as possible and ensures that time is used effectively.

Our experience includes the development of implementation plans for several organizations both domestic and internationally. Specifically:

- Creation of implementation plans for several Canadian airports to satisfy the requirements of Phase #1 of the transition to compliance with SMS regulations.
- Providing international clients in countries such as Kuwait and Gabon, Africa with customized implementation plans that provided a detailed breakdown of the work required and worksheets that can be used as records of progress.
- Assessment of organizations to help improve an existing SMS implementation plan.
- Assistance in the creation and review of SMS implementation plans for several American airports.
